Blackbaud Award Management™

## Scholarship Management and Donor Reporting Solution

The Blackbaud Award Management solution serves as the catalyst to improve student access to scholarships, hardship funds, bursaries and prizes. Enhance your institutions cross-functional visibility throughout the scholarship process, and revolutionise donor reporting.

Improve student access to scholarship funds

A single scholarship website makes it easy to promote all scholarships at your institution to your student population. Every student receives a unique view, with scholarships that best match his or her qualifications. Our integration with your student information system shortens the time it takes to complete applications and improves the quality and accuracy of data on each application.

Enhance cross-functional visibility throughout the scholarship process

Keep your scholarship process running on time and efficiently by giving all cross-functional stakeholders access to one central solution. Flexible permission functionality provides access to information while keeping student data protected.

Revolutionise donor reporting

We provide access to curated fund financial data, donor contact information, and beneficiary information for scholarship and non-scholarship funds, creating one unified database for donor reporting. User roles and permissions are available to curate donor communications without affecting your system or record.

> "Now we can use Blackbaud Award Management to match students to funds with just one application, and that has been a huge success."
