

Release Notes: Q3 2022 (July) Release

Before you begin to use Target Analytics **ResearchPoint**, take a moment to review the following notes. It is important to share this information with all **ResearchPoint** users in your organization.

Negative Currency Handling Improvements

In the third quarter update for **ResearchPoint**, we've made some updates with how data that transmits from **RP** to **Raiser's Edge** is handled.

Previously, users reported issues with negative currency values, which were not synced to **Raiser's Edge** as the product can't accept them. Now, **ResearchPoint** automatically syncs a negative currency value to **Raiser's Edge** as \$0.00 to prevent failure.

Research List Update

Performance improvements were made to **Research Lists** to help them load and process faster. Specifically, improvements were made to basic task queries, which should improve the loading when creating or loading **Research Lists**.

ResearchPoint Feedback

Do you want to influence the direction of the product? You can in the [Target Analytics Community](#). We're there with you in the community and we're listening for which features you want added or which existing functionality needs to be improved.

You can add a new idea, vote for ideas you want to see implemented, or respond to an existing idea with comments about what you need specifically. The more you tell us, the better we can prioritize and design the product around your organization's needs.

How do ideas get implemented? Ideas with the most likes are more heavily favored when we consider what we should put on our roadmap for **ResearchPoint**. To see all the current user-posted ideas, from the Target Analytics Community home page, in the **Navigation Menu**, click **Ideas**. We look forward to hearing from you on how you need **ResearchPoint** improved!
